

The anti-fly concept for effective control can also be found at www.desintec.de.

FLY CONTROL

DESINTEC® CyroEx
CyroEx is a growth inhibitor with a selective impact against fly and rat's tail larva. Beneficial insects are spared. No known resistance or cross-resistance to date. Not poisonous for animals, can be applied in occupied shed/stable. The active substance cyromazin is non-toxic for animals, application in occupied stable/shed possible. 250 g is sufficient for a brood area of 10 m².
Packaging: 1 kg tub, 5 kg and 12 kg bucket + 20 kg Bag

DESINTEC® CyroEx concentrate 50%
CyroEx concentrate 50% is a growth inhibitor with a selective impact against fly and rat tail larva. Beneficial insects are spared. No known resistance or cross-resistance to date. Not poisonous for animals, can be applied in occupied shed/stable. The active substance cyromazin is non-toxic for mammals, application in occupied stable/shed possible. 250 g water-soluble powder for 250 m² brood area.
Packaging: 1 kg tub and 5 kg bucket

DESINTEC® NeoEx
NeoEx granulat bait is a food and contact insecticide from the organophosphate class of insecticides (active ingredient: Azamethiphos) for combating adult flies, including vinegar flies, in animal sheds and barns. It is quick acting and long lasting, effective for up to 5 weeks. Sugar and other attractants make NeoEx granulat bait highly alluring for the flies. For a lasting reduction in fly numbers, the combined application of NeoEx granulat bait for combating adult flies and CyroEx for combating larvae in the liquid manure can be recommended.
Packaging: 400 g tub and 2 kg bucket

DESINTEC® NeoEx powder 10%
consists of water-soluble white powder from the organophosphate class of insecticides for combating adult flies, including vinegar flies, in animal sheds and barns. Sugar and other attractants make NeoEx powder 10% highly alluring for the flies. Bait and contact insecticide, it is quick acting and long lasting. Outstanding immediate impact and a lasting effect for up to 6 weeks. Application by coating with a paintbrush and/or by spraying. For a lasting reduction in fly numbers, the combined application of DESINTEC® NeoEx powder 10% for combating adult flies and DESINTEC® CyroEx for combating larvae in the liquid manure can be recommended.
Packaging: 500 g can; 1.5 kg bucket

DESINTEC® InsectEx micro
InsectEx micro is a water dilutable capsule suspension against crawling insects like cockroaches, ants, bed bugs, beetles like Alphitobius diaperinus, vinegar flies and other harmful insects in the hygiene area and also in food processing companies.
Packaging: 500 ml can

INSECT CONTROL

DESINTEC® InsektEx pour on
InsektEx pour-on is a ready-to-use solution for external application on cattle to fight flies and biting midges. This registered biocidal product based on pyrethroid is only used for cattle. All animals of a herd should be treated at the same time.
Packaging: 1 ltr., 2.5 ltr.

RED MITE CONTROL

DESINTEC® M-Ex Profi 80
M-Ex Profi 80 is a powder which is suspendable in water in a ratio of 1:9 for combating pest insects, e.g. red fowl mites, cockroaches and ants, in free-range poultry farming, aviary farming, battery farming. It can be used in an occupied stables if applied properly. M-Ex Profi 80 brings about a physical adsorption of lipids from the insects' epicuticle. The wax layer that protects the creatures from dehydration is destroyed and the pest insects being combated dehydrate, dry out.
Packaging: 15 kg bag

RAT AND MICE CONTROL

DESINTEC® BrodEx oatmeal bait
BrodEx oatmeal bait is a ready-to-apply bait which is excellently suited to effectively prevent the incidence of rats and mice in houses, stables and sheds. The active substance (Brodifacoum) in oatmeal bait inhibits blood clotting and makes the blood vessels' walls porous. The active substance is effective even when small quantities are ingested just once. Within 3-5 days of the bait being ingested, rats and mice die from internal bleeding. There is no warning for other rats and mice. BrodEx oatmeal bait contains a bitter-tasting compound that is unpalatable for humans and pets.
Packaging: 3 kg and 10 kg bucket

DESINTEC® BrodEx Paste
BrodEx Paste is a ready-to-apply bait which is excellently suited to effectively preventing the incidence of rats and mice in houses, stables and sheds. The active substance in BrodEx Paste inhibits blood clotting and makes the blood vessels' walls porous. The active substance is effective even when small quantities are ingested just once. Within 3-5 days of the bait being ingested, rats and mice perish due to internal bleeding. There is no warning for other rats and mice. BrodEx Paste contains a bitter-tasting compound that is unpalatable for humans and pets.
Packaging: 3 kg and 10 kg bucket

DESINTEC®
HYGIENE FOR STABLE AND ANIMAL

Definitely the right solution.

Clearing and Disinfection

Stall/Shed hygiene

Water hygiene

Liquid feed hygiene

Animal hygiene

Milk/Udder hygiene

Rat and mice control

Fly/Insect control

Staff hygiene

DESINTEC®

STABLE/SHED HYGIENE-CLEANING

DESINTEC® StallClean Basis
StallClean Basis is a high-alkaline (pH 12.5) liquid cleaner for animal stables/sheds and is especially suitable for removing stubborn dirt containing fat, protein and excrement from stone floors, tiles, wood, stainless steel, instruments, glass and plastics. StallClean Basis is not suitable for cleaning vehicles.

Packaging: 26 kg can and 260 kg drum

DESINTEC® StallClean Profi
StallClean Profi is a special, high-alkaline (pH 12.5) liquid foam cleaner for animal stables/sheds and is especially suitable for removing stubborn dirt containing excrement, fat and protein. StallClean Profi is particularly suitable for cleaning in abattoirs, cutting and processing facilities in the meat and fish industries and for removing smoke resin films in smoking plants. StallClean Profi is also recommended for the professional removal of complex impurities consisting of fat and protein and also limescale, particularly in dairies and the food and drink industry. StallClean Profi is not suitable for cleaning vehicles.

Packaging: 22 kg can and 230 kg drum

DESINTEC® FL-R2
FL-R2 is an acidic cleaning concentrate for milking parlours and stainless steel surfaces. FL-R2 is a liquid, acidic cleaning agent for chemical foam cleaning. FL-R2 removes stubborn inorganic films of limescale, minerals and rust (milk residues). The level of special corrosion inhibitors in the product makes it ideal for surfaces made from tin, aluminium, copper and their alloys.

Packaging: 12 kg can

STABLE/SHED HYGIENE

DESINTEC® Peroxx Liquid
Peroxx liquid is an acid and foam surface disinfectant for animal sheds, stables and stable equipment, as well as being a highly effective disinfectant for footbaths. Peroxx liquid is stabilised, and highly synergistic in its effects, combination of peracetic acid, hydrogen peroxide, octanoic acid and acetic acid with a broad spectrum of effects to kill counter bacteria, viruses and fungi. These effects have been proven in extensive microbiological tests. Peroxx liquid is also effective at low temperatures (4 °C). Peroxx liquid is free of chlorine, phosphates and aldehydes.

Packaging: 10 kg and 20 kg can

DESINTEC® FL-des GA forte
FL-des GA forte is a surface disinfectant containing Glutaral and Didecylmethylammoniumchloride used for animal stable/sheds, stable/shed installations, and feed and animal transport vehicles, as well as being a highly effective disinfectant for footbaths and walk-through baths. FL-des GA forte is a foam disinfectant without formalin and with a broad spectrum of effects to counter bacteria, viruses and fungi. These effects have been proven in extensive microbiological tests. It is also highly effective at low temperatures, with a lasting depth impact and a pronounced resistance to hard water. When applied in the manner recommended, the basic solution is gentle on materials and non-corrosive in relation to many metals and plastics.

Packaging: 10.4 kg can and 208 kg drum

DESINTEC® FL-des
FL-des is a surface disinfectant (a combination of Formaldehyde and Glutaraldehyde) for animal stalls/sheds, stall/shed installations, and feed and animal transport vehicles, as well as being a highly effective disinfectant for footbaths and walk-through baths. FL-des is a foam disinfectant with a broad spectrum of long-term, in-depth effects to counter bacteria, viruses and fungi. A high level of shed/stall disinfection is achieved with its excellent vapourisation.

Packaging: 11 kg can and 220 kg drum

DESINTEC® FL-Jodes
FL-Jodes is a disinfectant for shed/stall surfaces and equipment used in animal husbandry. StallClean contains iodine as an active substance and has a broad impact spectrum against bacteria, fungus and viruses. After being cleaned with StallClean the surface is sprayed with FL-Jodes as a basic solution using a foam lance or other specialist spraying devices.

Packaging: 10.7 kg can and 214 kg drum

STABLE/SHED HYGIENE-DISINFECTION

DESINTEC® FL-des Allround
Surface disinfectant for bactericidal, virucidal, fungicidal, tuberculocidal and antiparasitic treatment in animal stables/sheds. FL-des Allround is a two-component preparation with which bacteria, mycobacteria (tuberculosis), viruses, fungus (toadstools) and parasitic dauer larvae (worm eggs, coccidian oocysts, cryptosporidium oocysts and mite eggs) are combated effectively in a single operation. The components A+B have a synergistic effect, i.e. they increase each other's effectiveness. FL-des Allround 2:1 premixture is suitable for disinfecting animal stables/sheds, installations and equipment. FL-des Allround is free of aldehydes.

Important: Components A and B are applied only when combined with one another and in the ratio 2:1. Available on request

Packaging: Comp. A: 10.5 kg can and Comp. B: 6 kg can

DESINTEC® FL-coc garant
FL-coc garant is a disinfectant concentrate developed especially for combating parasites. FL-coc garant reliably kills roundworm eggs and developing forms of endoparasites (e.g. coccidiosis, cryptosporidia). The application of FL-coc garant prevents the endoparasites from being passed on from the shed/stall surfaces and facilities to the animals. After cleaning with StallClean products and disinfecting the shed/stall surfaces with the appropriate DESINTEC products, disinfection to counter long-term parasite stages is carried out with FL-coc garant: 2% to counter worm eggs and coccidio cysts.

Packaging: 10.7 kg can and 214 kg drum

DESINTEC® Vet4Des
DESINTEC® Vet4Des is effective against a wide spectrum of pathogens (bacteria, viruses and fungi). The disinfectant consists of substances containing peroxide, surfactants, organic acids and an inorganic buffer system. DESINTEC® Vet4Des also takes effect at low temperatures. It can be used in many different ways for the disinfection of surfaces, water pipeline systems, devices, footwear and air.

Packaging: 1 kg and 10 kg

DESINTEC® DESINFLOOR®
Desinfloor® is a litter product for the hygienisation of the tread and bedding surfaces in stables and sheds and for improving air quality in the animals' immediate surroundings. The hygienisation of the tread and bedding surfaces and a noticeable reduction of flies in the stables are achieved by virtue of Desinfloor's high moisture binding capacity. The addition of essential oils improves the quality of the air in the animals' immediate surroundings. Harmful substances such as ammonia are absorbed.

Packaging: 20 kg bag

Agrosan® DRY OUT
works by drying out surfaces in the environments of animals. Drying out destroys the habitats of bacteria, virus, algae and fungi. It is not harmful to animals or humans when used correctly. Agrosan DRY OUT does not corrode onto surfaces, and is therefore easy to remove again. It can be used for all farm animals and is a natural partner in professional animal husbandry. Spread by hand or with appropriate equipment (a handful approx. 50–100 g per m²).

Packaging: 25 kg bag

DESINTEC® FloorCal pH 12
FloorCal pH 12® is a litter powder for the hygiene of the tread and bedding surfaces in cattle stables. Dry hoof bath for cattle and dairy cows. The hygiene of the walk way and bedding is reached through very high absorption of the humidity capacity of FloorCal pH 12®. FloorCal pH 12® is on a pH of 12 and this alkalinity implies the disinfecting property of this sprinkling product.

Packaging: 25 kg bag and 1,000 kg Big Bag

HOOFHYGIENE

DESINTEC® HoofCare Special D
HoofCare Special is a disinfecting hoof care product for dairy cows and sheep for application in walk-through baths and as a spray. HoofCare Special cleans, disinfects and cares for hooves that are subjected to many stresses and strains in stable/shed housing. HoofCare Special has broad microbiological effectiveness due to glutaraldehyde. HoofCare Special, thanks to its care components, maintains the required elasticity of the hoof horn when applied properly. HoofCare Special is effective even at low temperatures and/or with hard water.

Packaging: 20 kg can and 215 kg drum

LIQUID FEED HYGIENE

DESINTEC® AH-tec
AH-tec is a special alkaline cleaning agent for water pipes, liquid feed facilities and plumbing systems in livestock farming. AH-tec is also suitable for liquid feed facilities equipped with a software module for automatic weekly cleaning. The alkaline cleaning solution is pumped through the feed or water pipes for at least 60 minutes. 1–5% basic solution cleaning and rinsing liquids are disposed of via the liquid manure. Animals must not come into contact with the cleaning and rinsing liquids.

Packaging: 27 kg can and 280 kg drum

DESINTEC® WH-R Aktiv Plus
WH-R-aktiv plus is an innovative disinfectant for the permanent disinfection of drinking water and drinking water systems in occupied stables, and for use in the automated acid fumigation process in mixing tanks and in liquid feed pipes after preliminary cleaning with AH-tec. WH-R-aktiv plus reliably disinfects tray water systems and liquid feed facilities following the thorough removal of organic dirt and slimy deposits (biofilms) which are colonised by microorganism. It also takes full effect at lower water temperature (+4 °C). 0.5–1% basic solution.

Packaging: 11 kg and 20 kg

DESINTEC® Chlordioxid Tabs
Disinfectant for the permanent disinfection of tray water and trough water systems in occupied chlorine dioxide stables/sheds. The finished product Chlordioxid is a 0.2% (2 g ClO2/l) chlorine dioxide basic solution (ClO2) Chlordioxid has a very high antimicrobial impact on bacteria, viruses, protozoa, fungus and yeasts. The antimicrobial property of Chlordioxid is based on an oxidative (separating off oxygen) effect rather than a chlorine reaction. Application: 0.1–0.2 ltr. Chlordioxid/m³.

Packaging: 4 kg bucket (16 x 250 g)

MILKING HYGIENE

DESINTEC® MelkClean Alkaline
DESINTEC® MelkClean Sour
MelkClean Alkaline is a chlorinated alkaline cleaning and disinfection agent with DLG (German Agricultural Society) approval for milking and milk cooling facilities. MelkClean Alkaline cleans and disinfects safely, dissolves unclean fat and protein residues safely and guarantees a low bacterial count in the milking facility. Cleaning should preferably be done in an alternately using MelkClean Sour. In this way milk concretion and films caused by water hardness and iron will be removed. MelkClean Alkaline can be used to clean tubes and pipes, milking equipment and cooling baths.

Packaging:
MelkClean Alkaline:
24 kg can, 245 kg drum and 1,175 kg container
MelkClean Sour:
24 kg can, 245 kg drum and 1,175 kg container

DESINTEC® MH-MilkWash
MilkWash can be used also in foam ups—ready to use. MH-MilkWash is for washing of the udder and teats before milking with spray bottles, spray equipment, dipping cups and towels. Use a towel per cow. Wash the udder and teats with one side of the towel. Wipe off the udder and teats—after wringing out the solution—with the other side of the towel.

Packaging: 20 kg can

DESINTEC® MH-Double Barrier D
MH-Double Barrier is a two component teat disinfectant and teat care product based on chlorine dioxide. It is used as a post-milking teat dip for dairy cows, sheep and goats. Provides the power and spectrum to be a teat dip for contagious and environmental mastitis causing pathogens. For use, the two components Base and Activator are mixed (1:1) in a clean dip cup just prior to application to generate the active component chlorine dioxide.

Packaging Base: 20 ltr. can and 200 ltr. drum
Packaging Aktivator: 20 ltr. can and 200 ltr. drum

DESINTEC® MH Double Sprint D
MH-DoubleSprint (D) is a two component teat disinfectant and teat care product based on chlorine dioxide. It is used as a post-milking teat dip for dairy cows, sheep and goats. Provides the power and spectrum to be a teat dip for contagious and environmental mastitis causing pathogens. For use, the two components Base and Activator are mixed (1:1) in a clean dip cup or sprayer just prior to application to generate the active component chlorine dioxide.

Packaging Base: 20 ltr. can and 200 ltr. drum
Packaging Aktivator: 20 ltr. can and 200 ltr. drum

UDDER HYGIENE-DIPPING PRODUCTS

DESINTEC® MH-LactiFilm D
MH-LactiFilm (D) is a ready-to-use lactic acid-based teat disinfection for dipping the teats after milking. MH-LactiFilm (D) is an orange liquid with storage stability between 0 °C and 30 °C and a skin-friendly pH level. After being dipped, MH-LactiFilm (D) forms a soft film that protects the teats for the period between the milking procedures. The added skin components keep the teat skin, which comes under a lot of strain in the milking process, soft. MH-LactiFilm (D) does not drip after dipping.

Packaging: 20 kg can, 200 kg drum and 650 kg container

DESINTEC® MH-LactiSpray D
MH-LactiSpray (D) is a ready-to-use teat lactic acid-based disinfection and care agent for spraying the teats after milking. MH-LactiSpray (D) is an orange liquid with storage stability between 0 °C and 40 °C and a skin-friendly pH level of 3.9. The spraying of the teats with MH-LactiSpray (D) can be done automatically. When sprayed, MH-LactiSpray (D) forms a thin, visible protective film. The added care components keep the teat skin, which comes under a lot of strain in the milking process, soft.

Packaging: 20 kg can, 220 kg drum and 650 kg container

DESINTEC® MH-Iodine Barrier
MH-Iodine Barrier is an iodine-based ready-to-use teat care agent and teat disinfectant. It is used as a post-milking teat dip for dairy cows. After being dipped, MH-Iodine Barrier protects the teats for a long period between the milking procedures. Valuable care components prevent the teat skin from becoming chapped and make udders soft and supple. MH-Iodine Barrier is highly productive and has been tested under practical conditions.

Packaging: 20 kg

DESINTEC® MH-IodineFilm
MH-IodineFilm (D) is an iodine-based ready-to-use teat care agent and teat disinfectant with 3000 ppm iodine. It is used as a post-milking teat dip for dairy cows, sheep and goats. After being dipped, MH-IodineFilm (D) forms a soft film that protects the teats for the period between the milking procedures. Valuable care components prevent the teat skin from becoming chapped and make udders soft and supple. MH-IodineFilm (D) is highly productive and has been tested under practical conditions.

Packaging: 20 kg, 200 kg drum and 650 kg container

DESINTEC® MH-Raidip 5000
MH-Raidip 5000 is a ready-to-use teat care agent and teat disinfectant based on 5000 ppm iodine. It is used as a post-milking teat dip and spray for dairy cows, sheep and goats, and for spraying sows' teats. MH-Raidip 5000 is a brown liquid with storage stability at between 0 °C and 25 °C whose purpose is the effective care and disinfection of the teats after milking. MH-Raidip 5000 is a biocide. Valuable care components prevent the teat skin from becoming chapped and make sows' teats and udders soft and supple. MH-Raidip 5000 is highly productive and has been tested under practical conditions. Its use in dipping and spraying ensures lasting udder health.

Packaging: 20 kg, 220 kg drum and 650 kg container

DESINTEC® MH-MilkAll D
MH-MilkAll is a ready-to-use teat care agent and teat disinfectant based on chlorhexidin. It is used as a post-milking teat dip and spray for dairy cows, sheep and goats. MH-MilkAll is a blue liquid with storage stability at between 0 °C and 25 °C whose purpose is the effective care and disinfection of the teats after milking. MH-MilkAll is a biocide. Valuable care components prevent the teat skin from becoming chapped and make udders soft and supple. MH-MilkAll is highly productive and has been tested under practical conditions. Its use in dipping and spraying ensures lasting udder health.

Packaging: 20 kg can, 210kg drum, 650 kg container
